Nothing from the past can match what is happening at this very time. The new microbiology is here. Enjoy it.

There is still a lot of fuss over genetically modified foods, especially in Europe. Are they natural or unnatural? Is this the reason we must cut and splicing we needed. One of my colleagues in Madison decided to clone turkey DNA for US Thanksgiving!

The history of microbiology is filled with amazing characters and great stories. How did its various developments change our science? Nothing from the past can match what is happening at this very time. The new microbiology is here. Enjoy it.

Fortunately, Hugh McDevitt, now a well-known immunologist at Stanford, was at HMS; we often lunched together and also played 'Career Night' geared towards graduating students about working in industry, academia, and continuing studies in graduate work.
